

How Data Moves Through the System

A plain-language walkthrough of the flow, from source database to people using it

What's automatic today vs. what's not

Step	Status	What that means
1. Data exists in the source database	Working	Real for testing purposes; the actual production database isn't connected yet
2. Export process runs	Manual	Someone has to start it — it doesn't run on its own schedule yet
3-6. Storage, cataloging, checking, logging	Working	Fully automatic once step 2 is started — no manual work needed here
7. Clean-up / organize step	Not built	People currently would only see the raw, unprocessed data
8. Teams querying the data	Working	The access rules (who can see what) are built and tested
